

GUILHERME AIRES

COMPUTER ENGINEER

CONTACT

✉ guilhermeaires2003@gmail.com

📍 Entroncamento, Portugal

🌐 <https://www.linkedin.com/in/guilherme-aires10>

🌐 <https://github.com/L3gend776>

SKILLS

- Systems Administration (Linux & Windows)
- Network Engineering & Protocols (TCP/IP)
- Cybersecurity & Information Security
- Shell Scripting (Bash) & Python Automation
- Virtualization (VMware & VM Management)
- Hardware Troubleshooting & Maintenance
- Teamwork & Fast Adaptation

LANGUAGES

- Portuguese (Native)
- English (Fluent - C2)
- Spanish (Basic - A2)

PROFILE

B.Sc. Graduate in Computer Engineering with a strong focus and interest in Networking, IT Infrastructure, and Cybersecurity. Proven ability to work effectively in team environments, possessing excellent communication skills and a high capacity for adapting to new technological challenges.

WORK EXPERIENCE

Sector Alarm Portugal 2020

Security Systems Intern

- Developed hands-on skills in installing CCTV video surveillance cameras.
- Programmed and tested automated alarm sensors.

Santa Casa da Misericórdia do Entroncamento 2019

Network Engineering Intern

- Responsible for the management and preventive maintenance of servers, switches, and routers
- Ensured the continuous operation and stability of the local network infrastructure.

EDUCATION

B.Sc. in Computer Engineering 2021 - 2026

Polytechnic Institute of Tomar

Core focus: Network Administration, Cybersecurity, Operating Systems, and Systems Programming.

Technical Degree in IT Equipment Management 2018 - 2021

Tomar Professional School

Specialization in Computer Maintenance and Network Infrastructure Deployment.

MY PROJECTS

Sequechat | Systems & Network Programming

Short Summary:

- Developed a real-time, terminal-based messaging application focused on inter-process communication (IPC) and network synchronization. The project ensures the sequential, reliable delivery and management of data packets between a server and multiple active clients.

Key Technical Specs & Skills Demonstrated:

- Networking & Sockets: Implemented client-server architecture using network programming standards to manage concurrent connections.
- Concurrency & Logic: Handled race conditions and synchronized data streams to guarantee message ordering (sequencing).
- Systems-Level Code: Developed using low-level languages taught at IPT (Kotlin), focusing on memory efficiency and operating system integration.

SequeMusic | Data Structures & Systems Engineering

Short Summary:

- Designed and implemented an optimized media management application centered around sequential data processing and advanced data structures. The project focuses on building an efficient backend logic to handle audio tracks, playlists, and playback queues with low memory overhead.

Key Technical Specs & Skills Demonstrated:

- Advanced Data Structures: Utilized complex structures (such as linked lists, queues, or custom collections) to manage dynamic playlists and sequential data access efficiently.
- File I/O & Parsing: Developed robust file-handling algorithms to read, organize, and parse media metadata or system configurations.
- Modular Architecture: Applied clean software engineering principles to separate core system logic from user interaction, ensuring scalable and maintainable code.
